**Abstract**  
**Copiers and its assemblies and Filtrations effects**  
**Study on a Dictation Book of what Allah has donated at the light**  
**Of the Converted method**

**Yahya Kh. Al- Talaq**

**Mu'tah University, 2006**

This study has taken one topic of the contemporary Lexicology topics, as converted elements in the assemblies and filtrations levels. Many conversers have seen that the structures are an essential level of the language, and sentences being the essential unit of this language.

This study has pertained the assemblies and filtrations levels of the verbs and letters copiers in (Dictation Book of what Allah has donated) as an attempt to know the extended range of the converted elements in the assemblies and filtrations levels and I Made all my interests in this subject because of lack information in this topic which can make all treatments at this topic in the light of the contemporary lexicology.

This study includes four chapters and conclusion. As the follows:

At the first chapter, consists of introduction and facilitation which depends at the life of Abu Al-Baqa' Al-Akbari. The second chapter, characterized on the verbs copiers and its action, departments, completeness, deficiencies, conduct and etc. The third chapter includes the copiers of the letters and its action and departments. The last chapter discusses the converted elements which can effect at the nominal sentences such as:

1. Each converted sentence has two structures: deeply that carries the general meaning of the sentence, and superficiality which can be glued with the linguist reality that has been used.
2. The Quranic miracles are being as slides that have been affected directly with converted elements (e.g., rank, increasing, deleting, and also the syntactic mark.
3. The converted transformative theory not being strange in Arabic structure, it has a connected roots as an indicated of presence of assumption basis at the scientists of the converted sentences, especially the converted sentence with a delegating element.
